The Rise of Customer Training and its Impact on Business Performance

Companies in every industry are in a state of disruption. This is especially true for software, technology and subscription-based businesses who must now deliver value at every stage of the customer lifecycle to fend off competition and ensure sustainable recurring revenue.

To remain competitive, companies are turning to education to differentiate themselves and add value to the customer experience. As a result, they are making a substantial investment in customer training.

The importance of training in the customer lifecycle cannot be understated. But how do companies go about the process of building a customer training program? What resources do you need, and what is the role of technology? In this guide, you will find the tools necessary to train your customers and drive measurable business outcomes.

Top Business Priorities for Organizations

- 1 Improving customer experience
- 2 Gaining market share
- 3 Developing new products/services
- 4 Driving innovation
- 5 Improving sales effectiveness

Source: 2019 HCM Outlook Study

Five years ago, customer experience did not make the Top 5 business priorities in Brandon Hall Group's annual HCM Outlook Study. Now it ranks first. Organizations have a better understanding of the impact and importance of a great customer experience and are responding accordingly.

How Training Impacts the Customer Experience

**Stronger
relationship
after the sale**

**Staying ahead of the
informed consumer**

**Less reliance on
customer support**

“Customer experience” is expressed as a single thing, but it is really a collection of factors, including:

- **A strong post-sale relationship** with the customer.
- **Access to information** that builds on the customer’s product knowledge derived from the Internet and social media.
- **Meeting customers’ needs** and expectations to decrease or eliminate reliance on customer support.

Delivering compelling learning to customers can have a big impact on the overall customer

experience. Customers must know how best to use your product and have success doing so. Customer training helps them do just that and builds value along the way.

Contextual learning teaches customers how to use or apply the product to solve problems, and is especially effective. Your customer-learning program also can include certifications, providing recognition and rewards for levels of product expertise. This can drive customer engagement further and can also provide ancillary revenue if you charge for the certifications.

What Drives Customer Experience?

Customer expectations
are changing

Product life cycles are
much shorter

Distributed and
augmented workforces

Training is becoming a
strategic weapon

Customer training is a critical
step in CX

Increasing pressure of corporate
compliance and security

Understanding the Customer Management Lifecycle

To fully understand the dynamics and impact of customer training, it is important to understand the customer-management lifecycle and the technology that supports it. Customer-lifecycle products are designed to help you manage a specific aspect of the process: collecting information about prospects, managing leads, marketing to them, turning them into paying customers and keeping them happy. Some companies, such as Salesforce.com, have programs to address each step. Others focus on specific tasks and provide features that overlap with the others. For example, companies classified as marketing-automation providers may also consider themselves players in the customer-success category. Here's how to differentiate the types of products:

1 Customer-Relationship Management

Take every lead you can collect and track through the sales cycle from all angles; individual, division, company, industry. That process includes managing renewals, gauging the temperature of your customer and recording every interaction, which is exactly what a CRM is made for. Salesforce.com is the granddaddy of customer success but there are other CRMs that provide most, if not all, of the same features.

2 Communication Automation

While the best learning-management systems include some marketing-automation features, this application is dedicated to the job but also gained favor among marketing pros in training businesses. These programs handle lead generation and nurturing, email campaigns, lead scoring and data analytics for tracking success and failure. Prime brands include Marketo, HubSpot and Oracle Eloqua.

3 Customer Success

The newest category of applications helps you stay on top of your customers throughout the entire lifecycle. By doing that, you'll retain them longer, discover what attracted them to facilitate finding more prospects and help them achieve their goals. As a result, they can be expected to buy more from you. Or, as the Technology Services Industry Association succinctly expresses it, the right customer-success technology can "reduce churn, lower costs and improve customer loyalty." Prominent examples include GainSight, Natero and Totango.

4 Customer Service

Otherwise known as help-desk or support systems, these programs provide assistance to the organizations buying your training and the individuals using it. The best ones provide a combination of services, including chat, a self-service knowledge-base, a ticketing system, service level agreement views and reporting to keep you informed about support metrics. Two examples are Zendesk and Kayako.

Where Customer Training Fits in the Learning Ecosystem

Customer training is part of Extended Enterprise Learning, as illustrated on the right. People on both sides of the supply chain benefit from the training you deliver. This can include your suppliers, external sales partners and most importantly, the customers who use your products. Brandon Hall Group research shows that 54% of organizations now extend learning beyond employees, and of those organizations, about 70% deliver training on new or existing products and services, or deliver product or service information.

THE LEARNING ECOSYSTEM

Larger than you think

Taking a closer look at the Learning Ecosystem, you can see that it starts with employees and extends to sales partners, customers and clients, and even “fans” who follow the brand and seek product knowledge. Extended learning can be a good revenue generator, but providing free product training to the general public can also create interest and demand among brand followers and others. The extended-learning ecosystem is tremendously important to retain customers by providing a great experience, attract new ones and give sales partners the information they need to maximize sales opportunities.

The Role of Frequency in Customer Training

The extended-learning audience is diverse, and there are also significant differences in the frequency of training, depending on who consumes it. As these graphics show, organizations believe that customers should be able to access training on a daily basis, much more often than other groups. Surprisingly, 80% of organizations still provide a lot of in-person instructor-led training, but that is not sustainable when customers demand any-time access to learning. Organizations seeking to optimize the impact of customer training must fulfill that demand through digital technology. But customer training is not the same as training employees. It's important to have systems that also track customer demand, deliver meaningful metrics and measure ROI.

THE ROI OF CUSTOMER TRAINING

● **Growth**
(source: McKinsey)
If a software company grows at **only 20%,** it has a **92% chance** of ceasing to exist within a few years

● **Cost**
Acquiring a new customer is **5 - 25 times more expensive than** Retaining an existing one

Product Adoption

(source: TSIA)

68% trained customers use the product

87% trained customers work independently

Renewal Rate

(source: TSIA)

Profit

(source: Bain & Company - Frederick Reichheld)

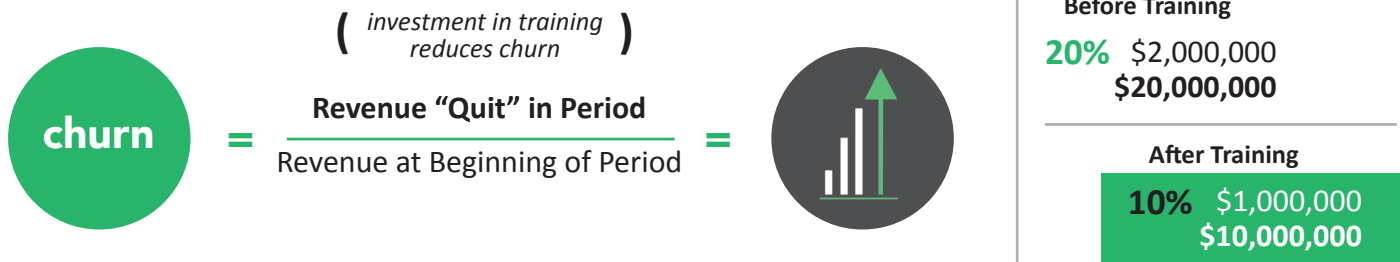

5% = 25% to 95%
renewal rate increment **more profit**

if renewal rate is **12%** higher, then profit increase by **60-228%**

The key to successful customer training is identifying and employing the right technology fit. The technology must deliver impactful learning, help you attract and retain customers, reduce churn and onboard new customers. Let's take a closer look.

The cost of acquiring a new customer is five to 25 times more expensive than retaining an existing one. Renewing customers, especially for software companies and others operating on a product- or service-contract business model, is critical. Industry data shows that renewal rates for customers that consume training are 90%, compared to 80% for customers who aren't engaged in training. At first glance, that may not sound like a huge impact, but it can mean the difference between a thriving company and a struggling – or defunct – one. A 5% renewal rate increment can lead to 25 to 95% more profit. Furthermore, as the graphic shows, investments in training reduces customer churn, which is killer.

HOW CUSTOMER TRAINING IMPROVES THE BOTTOM LINE

The Anatomy of a Customer Training Technology Stack

The key to maximizing customer-training ROI is having the right types of software to:

- Oversee the customer lifecycle
- Manage the learning processes
- Facilitate and manage communication between you and your customers.

The LMS lies at the heart of digital customer training. First, it serves as the gateway for learners—where they head to get their assignments, view alerts, receive notifications, take assessments, receive evidence of learning, and communicate with subject matter experts. Second, on the administrative side, the leading examples of LMSs, such as the Thought Industries Customer Learning Platform, provide a myriad of features.

There are several core features that can:

- Meet learners where they are to create an engaging learning experience.
- Allow you to turn your customer learning, including certification, into a profit center.
- Create different types of learning for a wide variety of use cases.
- Enable subject-matter experts unfamiliar with web-based authoring tools to easily create content.
- Brand your learning effectively.
- Capture data and report it in compelling ways to understand whether your learning is delivering desired outcomes and creating the customer experience — and revenue streams — you intend.

The different types of software for customer success and training can be divided into a few broad usage categories:

Customer Lifecycle and Success Management

Training Delivery and Behavior Change

Customer Communication

CORE FEATURES of a customer-learning technology stack

Native Authoring & Interoperability

Web-based tool to create a highly engaging learning experience

Powerful Commerce Capabilities

Transaction management, optimized conversion, upsell and discount

Cloud Hosted & Secure

Scalable platform, no maintenance or development

Customer Segmentation

Manage large volumes of concurrent learning partners

Brandable and Responsive

White-label experiences across all devices anywhere

Integrated, SSO & APIs

Open and connected to interact seamlessly with your tech stack

Data and Reporting

Deep data, learner engagement and revenue analytics

Engagement Tools

In addition to core features, there are other programs that make a business difference for your customer-learning program. They include:

Meeting Software

This is also known as virtual classroom, videoconferencing or webinar software, or virtual instructor-led training (VILT). Some programs are better suited for pulling people together with video, audio and whiteboards for a virtual meetings, while others are intended for slideshow presentations with audio. Some companies offer both. Examples include Zoom, BlueJeans, Webex, ON24, and GoToMeeting.

Chat

Chat windows, otherwise known as messaging or instant messaging, are common on software home pages, asking if you need help before the purchase. Chat is also a useful mechanism for ongoing customer support. It is essential to the stack because some people would rather “chat” by text on a web page than pick up the phone and speak to a human. Frequently, these are available as an add-ons to help-desks — Zendesk Chat or Kayako Messenger — or customer relationship-management programs — Salesforce Service Cloud.

Community Engagement Software

These products serve as targeted forms of social media. They give people a place to ask and answer questions and help each other. Though answers may come from customers, the company should monitor responses to ensure they’re correct, or add additional insights and delete spam or other inappropriate content. As the information aggregates, the forum becomes a valuable resource, allowing people to search for information without posing a question at all.

Blog software

Most every company has a blog these days, as a forum for sharing news directly with customers, promoting events, publicizing new case studies, and sharing advice and other information. Blog software has become content-management software, serving as a tool for creating full websites. WordPress, with open-source and commercial versions, leads the way with most of the global market. Often, the functionality of typical blog software is included in marketing automation programs.

You also may want to include additional programs to complete your customer-training stack. Sometimes, the features of these “one-offs” are also included in one of the platforms we’ve already covered, but that varies by vendor. They include:

Customer Engagement Tools

Survey Software

The ability to run customer-satisfaction surveys is important. SurveyMonkey is a favorite. You can quickly set up surveys to learn if people are satisfied with your customer-support. You can also query new customers about why they haven’t used their trial product or what it would take to get them to try the latest features you’ve developed.

Email Marketing

Until you have full-fledged marketing-automation software in place, you may rely on a dedicated email-marketing service such as MailChimp or Constant Contact. These programs help you stay in touch with training prospects and customers.

Best Practices for Choosing Customer Training Technology

Now that you understand the technology that makes up a winning customer-success and training operation, it’s time to start building. But first, here are three stacking tips from the pros that will save you time, money and frustration.

1

Interoperability is Important

All of the programs we’ve listed here generate their own data, but it’s just data in a silo unless you integrate it and learn from it. An advantage of working with the big names in each category is that they follow industry standards to enable you to connect diverse systems. That can be done by a connector, application programming interface (API) or a dedicated third-party tool, such as Zapier.

2

Choose Best-of-breed

While some of the companies referenced here may covet your customer-success and training business, they’re not all best at what they do. Map your technology needs to cover the big areas of your operation, sort out what your existing software already addresses, identify the gaps and run trial versions of applications that could help close them. Where you see overlap, go with services that appear to have staying power, have clear data-privacy options and play well with the other tools in your stack.

3

Remember: You’re a Customer Too

Your customers expect certain things in the training they buy from you: service that’s mobile and works on any device; browser-based so it’s always available; and modular and video-based so they can quickly learn just what they need. Make sure any service you subscribe to as part of your tech stack provides the same feature set: mobility, browser-based and outfitted with video training.

8 Steps to Building Your Technology Stack

Now you understand the technology needed for successful customer training. But how do you select the right technology to meet your unique needs? Brandon Hall Group has a customized selection process to help you identify the best customer training technology for your organization.

Build the Business Case

Start by identifying your needs. Make a blue-sky wish-list to address the types and frequency of learning you must deliver. Identify — as specifically as possible — business benefits. Conversely, you need to determine the impact if you do not conduct customer training or continue to use technology not designed for optimum customer learning.

Define Your Stakeholders

Will L&D own customer training? Or your sales training organization? Beyond ownership, who else has a stake in educating customers? Marketers? Your retail division (if you have one)? Technology must meet the needs of business stakeholders as well as learners. Make sure you have a firm understanding of who must benefit internally and involve them every step in making the technology business case. They can be your biggest allies — or impediments.

Identify Requirements

Based on the level of learning you intend to provide, what functionalities are required? You may be at one level of customer training now (or in the near future), but you must also look to the future. What will you need in three to five years? Understand where you are headed and ensure your vision is aligned with business stakeholders and business goals.

Create Use Cases

We've covered customer training in a general sense, but to ensure you have the right technology, you must create specific use cases. How will customers interact with the training? What are the goals for the training? How will you measure success? All of these things must be thought through and modeled in use cases.

Scripted Demos

Once you build use cases, leverage them to create scripts for vendor demonstrations. Don't ask a sales rep for a generic demo of functionalities and features. Request demos that address your use cases. You must know how the system accommodates the specific learning needs of your company and its customers.

Use References

Once your vendor choices are down to a couple of top contenders, contact their current clients. Ask questions based on your use cases. Some buyers avoid references because they think vendors would not provide them unless they were going to praise their products. But if you ask specific questions, references will provide you with insights you might not expect. Even the best user experience includes some hiccups and references will tell you about them — if you ask the right questions.

Identify Support Levels

Since no system is perfect, you must know how the technology provider supports their product. Ensure you identify who is responsible for support during and after deployment, and the type and level of training you require to run the system. How much of the training is included at no extra cost? What do you need to pay for? Support can have a big impact on the total cost of technology ownership, so it's wise to ask these questions before making a decision.

Integration

Focus on integration with other customer-facing systems. How will your customer-training technology match up with the company's learning ecosystem? If you are going to sell training, ecommerce functionality is required, as well. You must really understand how the new system will work with all other technology your organization relies on.

Key Takeaways

- Customer training shares some of the same goals and modalities with internal training but has unique elements that require a separate strategy, with technology designed specifically for customer training.
- Ensure you understand how customer training fits into the customer lifecycle, and the types and frequency of training that are best for your organization.
- Focus on finding the right technology fit for your organization. Done correctly, customer training not only engages customers and prospective customers, but creates a revenue stream and delivers great ROI that includes reducing customer churn.
- It's critical to ensure your technology stack includes core features you need to make customer training successful, but pay attention to other critical options, such as chat, community software, surveys and email marketing to optimize your outcomes.
- When it's time to select technology, don't take shortcuts. Ensure you approach selection strategically and make the business case, leverage internal stakeholders and create specific use cases that the technology must address.

About Thought Industries

Thought Industries was founded with a belief that online learning experiences should be so much better. Their mission continues today in building a technology for those who are driving the future of online learning and need a Customer Learning Platform to help them, build, scale and deliver training and behavior change that leads to higher engagement, product proficiency and retention.

Our Services

GET HELP TO DRIVE RESULTS FOR YOUR TALENT

In today's volatile and global business climate, managing talent for high-performance plays an increasingly crucial role in an organization's growth and future success. Effective talent management is a top priority in organizations everywhere because, while organizations recognize the need to obtain and retain people with the very best skills, they continue to struggle to implement effective strategies to do so. HR and Learning professionals need to be able to successfully define organizational talents needs and skills, identify talent strengths and career goals, and align organizational needs to individual needs. Rethink your strategy, validate your assumptions, transform your business, and optimize your time with the use of reliable data, tools, and guidance.
